

**Title of the study:** **Measure for Dyadic Conversation in Aphasia (MDCA): Psychometric testing**

**Principal Investigator:** Professor Katerina Hilari

### Case History Form- PWA

*Responder: PWA, partner, referrer (aphasia group co-ordinator)*

**Participant number:**

**Age:**

*In years*

---

**Years of education:**

*In years*

---

**Sex:**

*Male, Female, Other (specify preferred term)*

---

**Ethnicity:**

*White, Black, Asian, Other (specify)*

---

**Marital status:**

*Single, married or with partner, divorced or widowed*

---

**Living arrangement:**

*Lives alone, lives with others (specify), assisted accommodation (specify)*

---

**Language of testing:**

---

**Primary Language:**

*The language most frequently used*

---

**Languages Used:**

*Uses more than one language on a regular basis or used prior to aphasia? If yes, specify*

---

**Work Status:**

*Full time, part time, volunteer, student, not working, retired, retired due to stroke, other (specify)*

---

**History of conditions:**

*Any prior conditions that impact communication or cognition*

---

---

**Stroke:**

*Number of strokes and years post stroke (the stroke causing aphasia)*

---

**Conditions arising from stroke:**

*Apraxia, dysarthria, hemiparesis etc*
