

Title of the study: **Measure for Dyadic Conversation in Aphasia (MDCA): Psychometric testing**

Principal Investigator: Professor Katerina Hilari

Case History Form- Partner

Responder: partner

Participant number:

Relationship to person with aphasia:
*Spouse/Partner, Child, Other family (specify),
Other (Specify)*

Contact with person with aphasia:
Frequency/times per week

Years of education:
In years

Sex:
Male, Female, Other (specify preferred term)

Ethnicity:
White, Black, Asian, Other (specify)

Marital status:
*Single, married or with partner, divorced or
widowed*

Living arrangement:
*Lives alone, lives with others (specify),
assisted accommodation (specify)*

Language of testing:

Primary Language:
The language most frequently used

Languages Used:
*Uses more than one language on a regular
basis? If yes, specify*

Work Status:

Full time, part time, volunteer, student, not working, retired, stopped working due to caring responsibilities, other (specify)

History of conditions:

Any conditions that impact communication or cognition
